There are 2 houses on Clarendon Place (close to Psychology) that have been adapted for wheelchair users. There is a ramped level access to the front door and each house contains 8 bedrooms in total. The accommodation is spread over 3 floors - on the ground floor there are 2 bedrooms, an accessible kitchen and a level access shower room/WC. On the first floor there are 3 bedrooms, a kitchen and a shower room/WC and the same again on the 2nd floor.

The drawing to the left gives you an idea of the layout of the ground floor of one of these houses. All the houses are very similar in size and layout. There is a lobby area between the kitchen and shower/WC which does not appear on the diagram.

All doors are automatic (except shower room), the front door is fob operated with a push button door release on the inside. The bedroom doors are fob operated with a push button door release on the inside.

Both bedrooms on the ground floor are very large measuring at least 5 x 3.7 metres so there is ample turning space, storage for multiple wheelchairs and other equipment.

If another room is required for a carer/personal assistant, they would be offered a room on the first floor.
Each bedroom contains a single bed (double can be provided if necessary), wardrobe, desk, chair, bedside cabinet, shelves and a wash basin. The basin is on a pedestal with single lever taps and the height of the basin is 80cm. The window slides open from the top and is operated by a switch on the wall. The curtains are operated with a remote control. There are a minimum of 7 electrical sockets and an internet access point.

The kitchen door is automatic with push buttons and is accessed from the hallway. There is a good sized kitchen/dining room with low level work surfaces. The work top height is 81cm and the dining table is a drop leaf table that is wall mounted. The hob and sink are fitted in the low level work surface area. The oven is housed below the work top and the microwave is positioned on the low level work surface. The clearance height and width below the hob is 59cm(w) and 62cm(h). The clearance width below the sink is 92cm and the taps are single levers. There is a separate fridge and freezer. There is a washer/dryer that is for the use of all students in the house. There is an automatic door with push buttons at the far end which leads to the shower room.

The shower room is a level access wetroom with shower area, wash basin and a standard toilet, except one house which has a clos-o-mat toilet. There is a drop down shower seat and grab bars to the side as well as at the sides of the toilet. The basin is wall mounted at 75cm height and clearance below of 63cm.
